

HOW IT WORKS

What makes DermaTherapy® Bedding so effective? It's simple: uniquely structured micro-fibers distribute moisture evenly over the surface of the sheet. As moisture evaporates, the wetness and clamminess associated with night sweats and hot flashes is reduced. The result is a comfortable sleeping surface that stays dry and cool throughout the night.

- The uniquely structured fibers wick away moisture and dry skin more quickly.
- Unlike cotton and poly-cotton sheets, DermaTherapy Bedding is smooth and soft.
- Antimicrobial treatment maintains freshness and eliminates odors on the fabric caused by germs and bacteria.
